					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments:

This catalogued stream has a barrier falls. The falls is listed on the USGS topo map and has been confirmed to be a barrier to anadromous fish passage by Bill Davidson (area CF biologist) Dick Crone (biologist with the NSRAA) and USFS Sitka District biologists. The habitats upstream of this falls are not used by anadromous fish.
